PROPAGANDA
THE ART OF SELLING LIKES

It may feel as if the present-day political world is spinning out of control, as are the various means of selling political thought. This program analyzes what is behind past and current propaganda, and questions what exactly is “the truth.” Propaganda identifies the predominant means and methods of persuasion that have been employed by those seeking power, often at any cost. The documentary looks back at key epochs of history when propaganda defined nations and kept populations in check. The time-honored tools of propaganda have included novels, poetry and oratory; statuary, paintings and posters; theatre, film and television; architecture, music and Internet technology. 1x60, 1x90 HD

In August 1969, nearly half a million people gathered at a farm in upstate New York to hear music. What happened over the next three days, however, was far more than a concert. It would become a legendary event, one that would define a generation and mark the end of one of the most turbulent decades in modern history. Occurring just weeks after an American set foot on the moon, the Woodstock music festival took place against a backdrop of a nation in conflict over sexual politics, civil rights and the Vietnam War. Woodstock turns the lens back at the audience, at the swarming, impromptu city that grew up overnight on a few acres of farm land. **8x60, 1x150 + 7x120 HD**

And at the same time, NASA is returning to crewed spaceflight with gusto, building a rocket more powerful even than the storied Saturn V to take us far beyond Earth. But this is not the first time we’ve seen signs of a rocketry renaissance. In the 1960s, there was a boom—and bust—in the privatization of space travel. Will today’s optimism about companies like SpaceX and Virgin Galactic prove prescient, or nothing more than hype and wishful thinking?

Apollo’s Daring Mission
NOVA tells the in-depth story of Apollo’s riskiest mission: a sixteen-week race to beat the Soviets and send three men in a tiny space capsule to, around and back from a moon a quarter of a million miles away—before 1968 came to a close. To mark the 50th anniversary of this historic mission, Apollo 8’s astronauts, Commander Frank Borman, Command Module Pilot James Lovell and Lunar Module Pilot William Anders reconvene and tell the story through a fascinating and untapped prism: the incredible science, extraordinary engineering feats and huge technological challenges that enabled them to go where no one had ever gone before.

Pluto and Beyond
When the New Horizons space craft whizzed by Pluto in 2015, onlookers were dazzled by the breathtaking images it beamed home. They revealed a never before seen alien landscape—a world of mountains made of ice mixed with plains of frozen-solid methane and nitrogen. And now, New Horizons is at it again, this time Pluto and Beyond. In 2019, the craft flew an object known now as MU69, which is believed to be a primordial building block of the solar system. This flyby sheds light on one of the least understood regions of our solar system: the Kuiper Belt.

Thai Cave Rescue
The world held its breath as a courageous team of international cave divers joined Thai Navy Seals to rescue 12 young soccer players and their coach who were stranded for nearly two weeks inside a flooded cave in Thailand. NOVA takes a dramatic, inside look at the science behind the rescue, with stories from the children, their families and the rescuers who frantically explored every option—from pumping water to drilling—ultimately choosing to carry the children through miles of flooded and rugged caves. In what proved to be a miracle of technology, medicine and most of all, courage—all 12—who had been thought lost—were rescued.

Addiction
NOVA joins scientists and sufferers alike as they probe the mysteries of addiction. They are discovering that addiction is not simply a lack of willpower; drug abuse produces significant chemical changes in the brain—changes that are hard to control, and hard to reverse. What’s worse, many addictions start with prescription or even over-the-counter painkillers for entirely legitimate ailments. And it is not just drugs—alcohol, sugar, caffeine, even exercise can incite addictive behaviors. In the midst of the opioid crisis, and in a world in which many other diseases can be traced to addictive behavior, NOVA investigates: how do addictions work?
**Distracted While Driving**

Distracted While Driving follows the lives of eight drivers over six months using in-car cameras and tracking technology to monitor the often-hidden behavior of distracted drivers. Producers gathered, observed and examined weekly data from the subjects to gain a fresh picture of the many activities drawing drivers’ attention off of the task of driving. In addition, experts from MIT, Cambridge Mobile Telematics, Safety Track and the University of Connecticut provided monitoring equipment, data storage and expert analysis. Distracted While Driving gives audiences a firsthand look at emerging technologies that could one day offer solutions to rising crash statistics, featuring research being done at Google on next-generation in-car infotainment systems, and a Swedish-based company developing technology that could one day allow cars to understand our feelings and make driving decisions based on our own individual needs. 1x54 HD

**Einstein’s Quantum Riddle**

Einstein called it “spooky action” at a distance but today quantum entanglement is poised to revolutionize technology from computers to cryptography. Physicists have gradually become convinced that the phenomenon is real—two subatomic particles that mirror changes in each other instantaneously over any distance—but a few doubts remain. NOVA follows a groundbreaking experiment in Vienna, Italy and the Canary Islands to use quasars at opposite ends of the universe to once and for all settle the few remaining questions. 1x60 HD

**Something in the Air**

Pollution is killing tens of thousands of people every day around the world. Cities across Asia and Europe have had to shut down and stop traffic to manage “Airpocalypse” pollution events when the air is unsafe for the people who live there. But air pollution is a major killer everywhere, even places we think of as safe. Pollution causes a range of respiratory diseases, and even short exposure can change how our DNA functions. New science is finding that microscopic bits of air pollution may be able to travel from your nose directly into your brain, and could be causing dementia in humans. How unsafe is the pollution we can’t even see? Something in the Air explores these and other questions about the most precious resource we have—air. 1x60 HD
